-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-21 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Farber et al., U.S. Patent 3,951,906.

This patent shows compositions which comprise styrene acrylonitrile copolymers and mica. See specifically claim 12 as well as column 2 lines 1+. The method of improving the chemical's resistance is considered anticipated by this showing given the fact that these same ingredients are combined together.

The only difference from the instantly claimed invention and that as disclosed in the prior art is the incorporation of less than 28% by weight of the acrylonitrile comonomer. This patent teaches the acrylonitrile content to be within the range of 20 to 40% and exemplifies copolymers having 30% acrylonitrile comonomer. The Examiner maintains however that one of ordinary skill in the art would be motivated to use less than 28% by weight of the acrylonitrile since this amount is suggested by the

Art Unit 1713

range disclosed at column 2 lines 14-16. As such, the claims are rendered prima facie obvious.

The rejection as set forth under Hilti et al. or Zilg et al. is herein withdrawn. This is in view of applicants' arguments with respect to the mica being a non-obvious species of phyllosilicate as shown generically within these references.
